

Claims

~~[Scope of Claims]~~

~~[Claim 1]~~ 1. Film for accelerated compost fermentation which is characterized in that it comprises a composition in which the chief component is polymer containing polyether chains as structural units, and the water vapour permeability thereof is at least 300 g/m².24h, the oxygen permeability is at least 1,000 cm³/m².24h.atm and the carbon dioxide permeability is at least 10,000 cm³/m².24h.atm.

~~[Claim 2]~~ 2. Film according to Claim 1 which is characterized in that the polymer containing polyether chains as structural units is of at least one type selected from the group comprising polyetherpolyamide block copolymers, polyetherpolyester block copolymers and polyetherurethanes.

~~[Claim 3]~~ 3. Film according to Claim 1 where the film of Claim 1 is reinforced by means of a nonwoven material or net.
